

RNA-LNP Based iPSC Reprogramming Kit and iPSC Lines Limited Use Label License (LULL)

Notice to Purchaser:

The purchase of this product grants the recipient a **limited, non-transferable license** to use the supplied quantity **solely for internal research and educational purposes** for the recipient's own benefit.

No rights are granted—explicitly, by implication, or through estoppel—to **resell this product or its components**, or to sell or distribute **iPS cells generated using this product**, or their **derivatives** (including progenitor or fully differentiated cells).

This product, any iPS cells generated or derived using this product, and any derivatives or modifications thereof, **must not be used for administration to humans or animals for therapeutic, diagnostic, or prophylactic purposes**. This includes but is not limited to **clinical use, cell therapy, transplantation, or regenerative medicine**. Additionally, this product **must not be used to create human embryos or chimeric embryos** (human-animal combinations) for any purpose, including research.

The product and derived materials **may not be used in any commercial applications**, including but not limited to:

1. Manufacturing or quality control of any product using iPS cells or their progeny (but not modifications).
2. Providing services, information, or data to third parties for financial gain (beyond cost recovery), except by not-for-profit research institutions conducting noncommercial work or acting on behalf of licensed third parties.
3. Using the cells for screening, development, or optimization of therapeutics, diagnostics, or prophylactics, unless performed by or for a not-for-profit research entity for internal, noncommercial purposes, or under a separate written **Limited Sub-License Agreement** with uBriGene Biosciences.
4. Selling, leasing, distributing, transferring, or licensing the cells to any third party for financial gain.
5. Transferring iPS cells or progeny (but not modifications) to for-profit entities, even for research purposes.

Anyone intending to use this product, derived iPS cells, or their modifications for **commercial purposes** must first obtain an **appropriate license** covering the intended application. If iPS cells or progeny are transferred to a for-profit organization, the transferor must **inform the recipient** that a license is required for any internal research use.

To obtain commercial rights for the above commercial applications (1) through (5), purchasers are requested to contact the following parties.

- Academia Japan, Inc. directly at license@ips-ac.co.jp
- uBriGene (MA) Biosciences Inc. at contact@ubrigene.com

Exceptions:

The following are **not considered commercial uses** under this license:

- (a) Basic research such as target discovery, validation, or assay development.
- (b) Transfer of cells to a not-for-profit research organization for its internal, noncommercial research.
- (c) Screening or safety testing of compounds for therapeutic, diagnostic, or prophylactic development by academic or not-for-profit entities, for their internal noncommercial research.
- (d) Licensing or commercialization of research findings, except when the results themselves are iPS cells, their derivatives, or drug/drug-candidate products based on such cells.

No rights other than those expressly stated here are granted by the sale of this product.

Notice: If the Materials are transferred to third parties, including Repositories, in accordance with the terms of this label license accompanying the Materials (hereafter "Label License"), the transferring party should notify recipients of such Materials of these terms by transferring a copy of the Label License to the recipients.
